Overview

Initium Capital is a multi-disciplinary, early-stage venture firm focused on building companies in information technology and life sciences. Initium partners are very experienced hands-on early stage specialists offering added value throughout the process- from seed to maturity. The firm leverages an extensive global network on behalf of its portfolio companies, pulling from the best resources worldwide to add value. The Initium network of relationships includes CEOs of most major companies in our targeted sectors throughout the world, CIOs in global companies, professors at many leading universities, many of the world's largest individual and institutional investors, and many other leaders in the public and private sectors.

Fund I is specifically targeting disruptive emerging leaders within nanotechnology, bioinformatics, genomics, intelligent devices, and advanced software. The Fund is sufficiently flexible however to consider any emerging technology company that shows promise to be a market leader while protecting its intellectual property.

Mark Montgomery is founder and Managing Director of Initium Capital. Mark has been a "serial entrepreneur" since the early 1980s when he launched his first business with his wife Betsy. Since that time Mark has held every senior position in multiple emerging companies, including founder, CEO, COO, CTO, CMO, and CFO. Mark was 29 when he wrote his first business plan that became a public company.

Mark was founder of a business-consulting firm in 1985 that was converted into a private technology incubator (GWIN) in 1995. GWIN has conceived and launched several notable technology companies from inception, including Initium Capital and two online networks- one for small business leaders (Virtualfranchise.com), and one for leaders of global organizations (GWIN Pro). Mark was also the founder of the original "Shop The Web Campaign" in 1997. His latest personal effort is KYield- one of very few emerging software companies invited to bid on advanced systems in the DoD and NSA. For the past several years, Mark has increasingly focused on multi-disciplinary areas to include the convergence of life sciences and information technology.

Mark has consulted several hundred clients in his career, including non-profits, traditional small businesses, educational institutions, emerging tech leaders, and global corporations.
